Important Notes:

Without exception, all current safety regulations must be observed in those countries where our products are used.

The photos shown in this brochure feature construction sites in progress. For this reason especially safety and anchor details cannot always be considered as conclusive or final. These are subject to the risk assessment carried out by the contractor.

The systems or items shown are not necessarily available in all countries.

Safety instructions and load specifications are to be strictly observed at all times. Separate structural calculations are required for any deviations from the standard design data.

The information contained herein is subject to technical changes in the interests of progress. Errors and typographical mistakes reserved.

BR shaft platforms

- 22 Safe support for inside shaft formwork
- 24 Components

Climbing System CB

Safety at all heights

CB climbing scaffold systems provide high levels of safety in all areas of application.

With the CB 240, the formwork is mounted on a carriage with roller bearings and can be moved by approx. 75 cm. This results in sufficient space being created for cleaning the formlining as well as for reinforcement work. The 2.40 m wide platform planking is flush with the Carriage CB and free of any tripping hazards.

With the CB 160, the formwork is simply tipped backwards for striking. With both systems, the formwork is moved to the next pour together with the scaffold in one crane lift.

Photo on the right
Bridge pier
Architectural concrete with CB 240 and VARIO GT 24.

Cultural Buildings
High-quality architectural concrete with CB 240 brackets and VARIO GT 24.

Apartments
CB 240 and CB 160 scaffold brackets with VARIO GT 24.

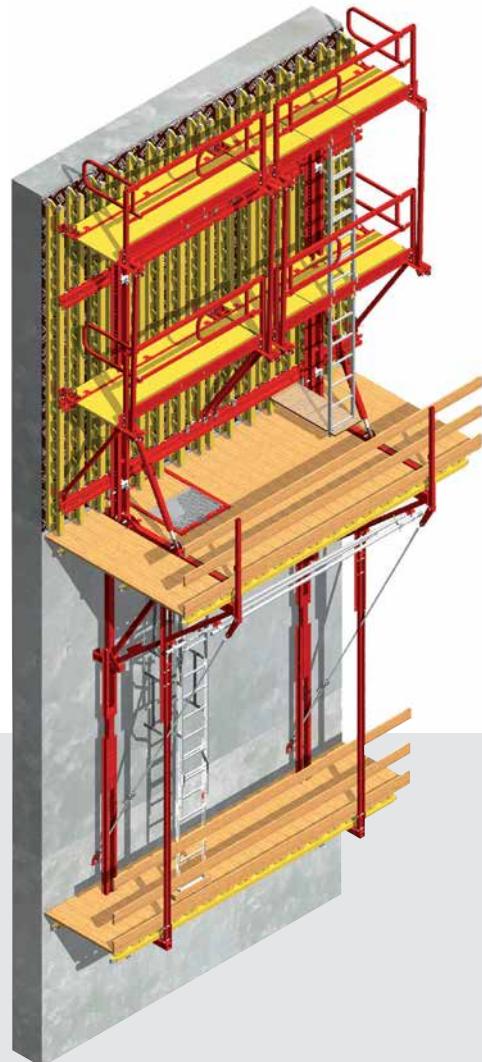

Climbing System CB

For all heights and every ground plan

Hotel construction
CB 240 scaffold brackets complete with finishing platform and TRIO.

CB 240
Safe working areas and access with system components on the formwork and CB climbing scaffold.

30-storey apartment building
CB 240 and CB 160 scaffold brackets with VARIO GT 24.

**LNG liquid gas tanks**

Circular walls Ø 77.50 m with
CB 240 and VARIO GT 24.

Bridge pier

Architectural concrete with
CB 240 and VARIO GT 24.

**Administration building**

CB 240 with TRIO and
VARIO GT 24.

**Safety**

PERI ladder for safe access
to the finishing platform.

With VARIO GT 24, MAXIMO, TRIO or RUNDFLEX

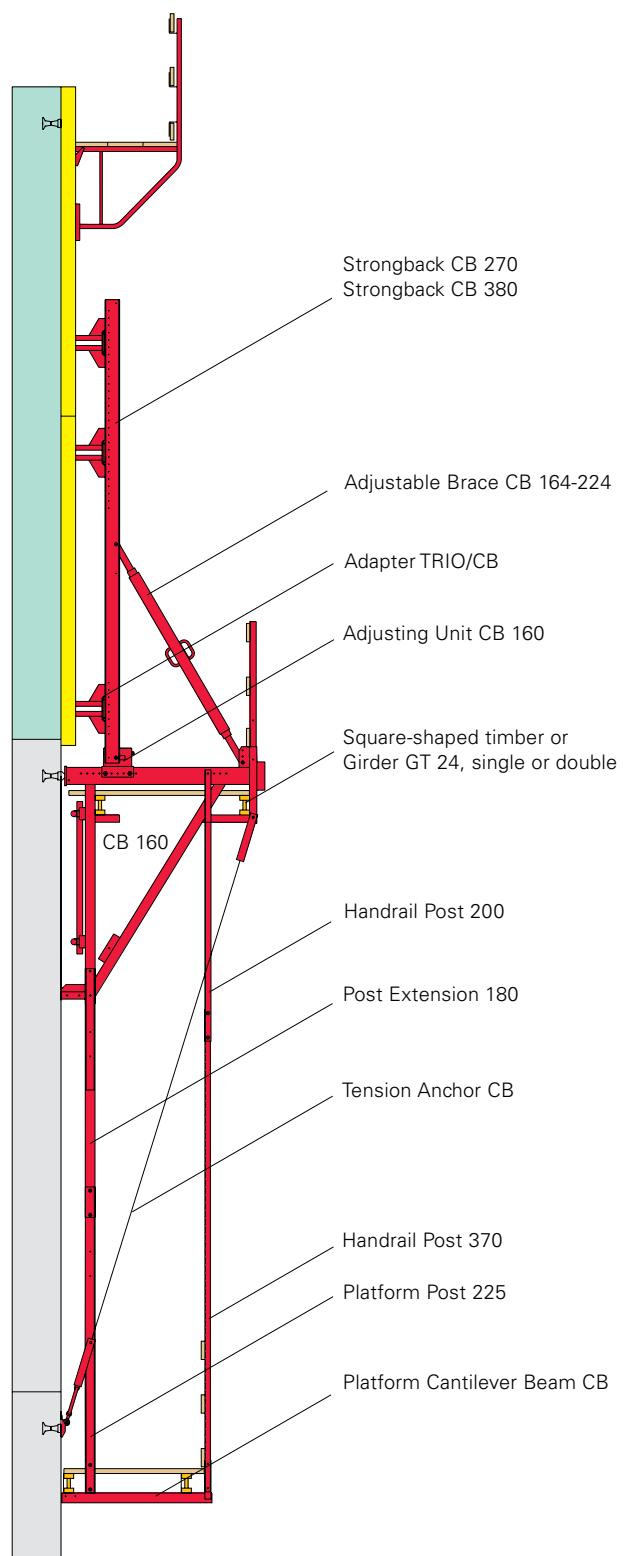

CB 240 with VARIO GT 24

Concreting height 3.60 – 5.40 m

CB 160 with MAXIMO or TRIO

Concreting height 3.60 – 5.40 m

Airport control tower
46 m high, external Ø 6.85 m.
With PERI RUNDFLEX and
CB 240 brackets.

Airport control tower
46 m high, external Ø 6.85 m.
With PERI RUNDFLEX and
CB 240 brackets.

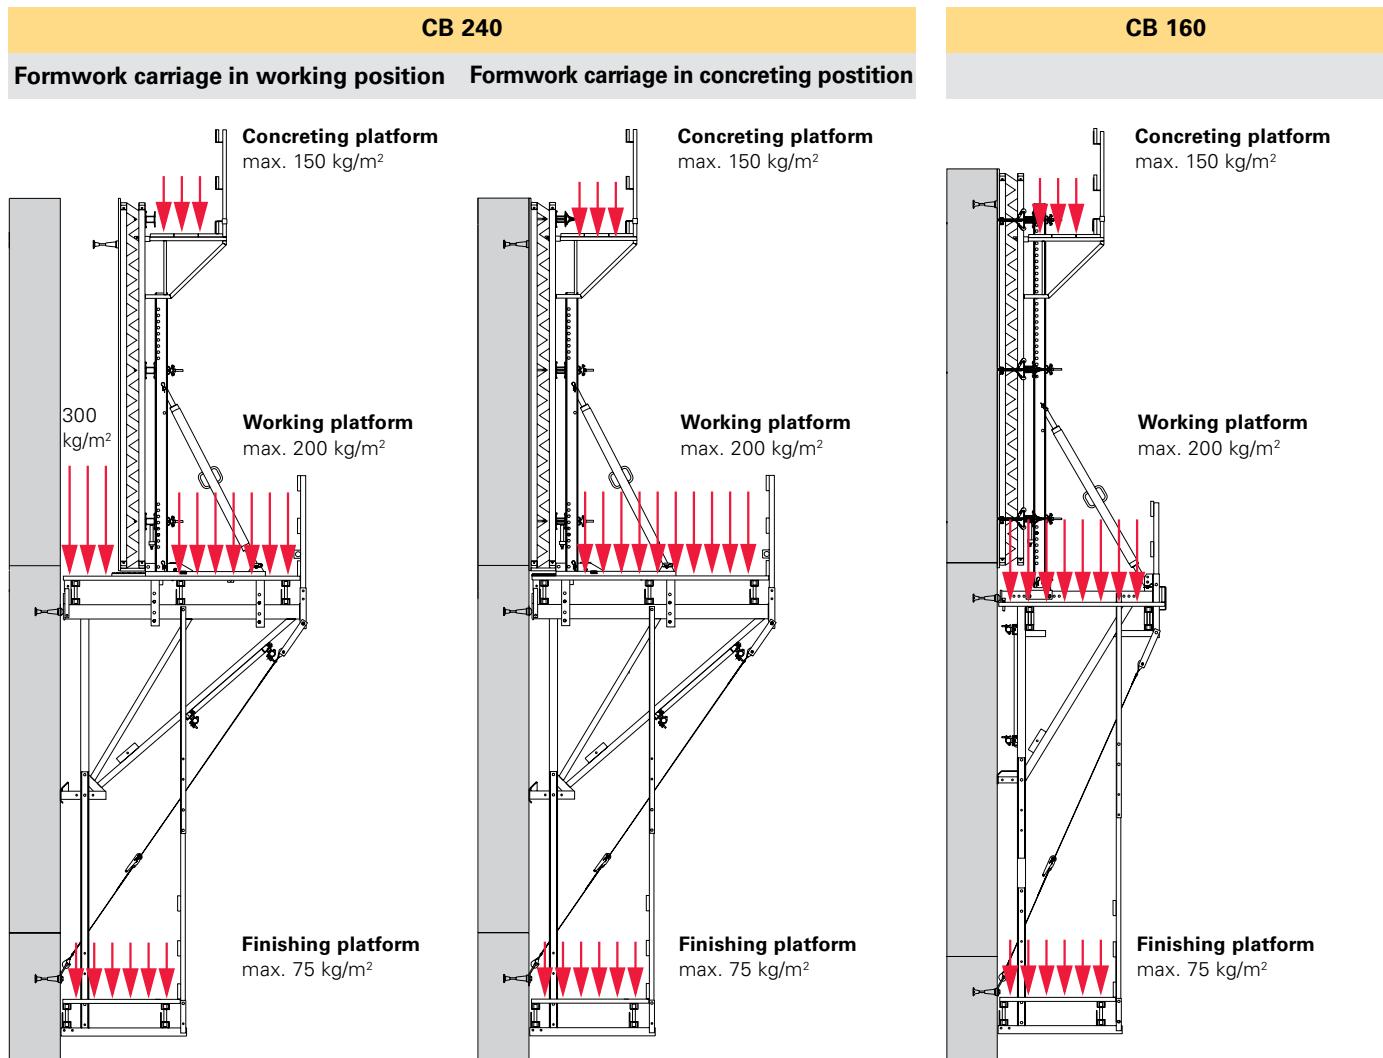

Climbing System CB

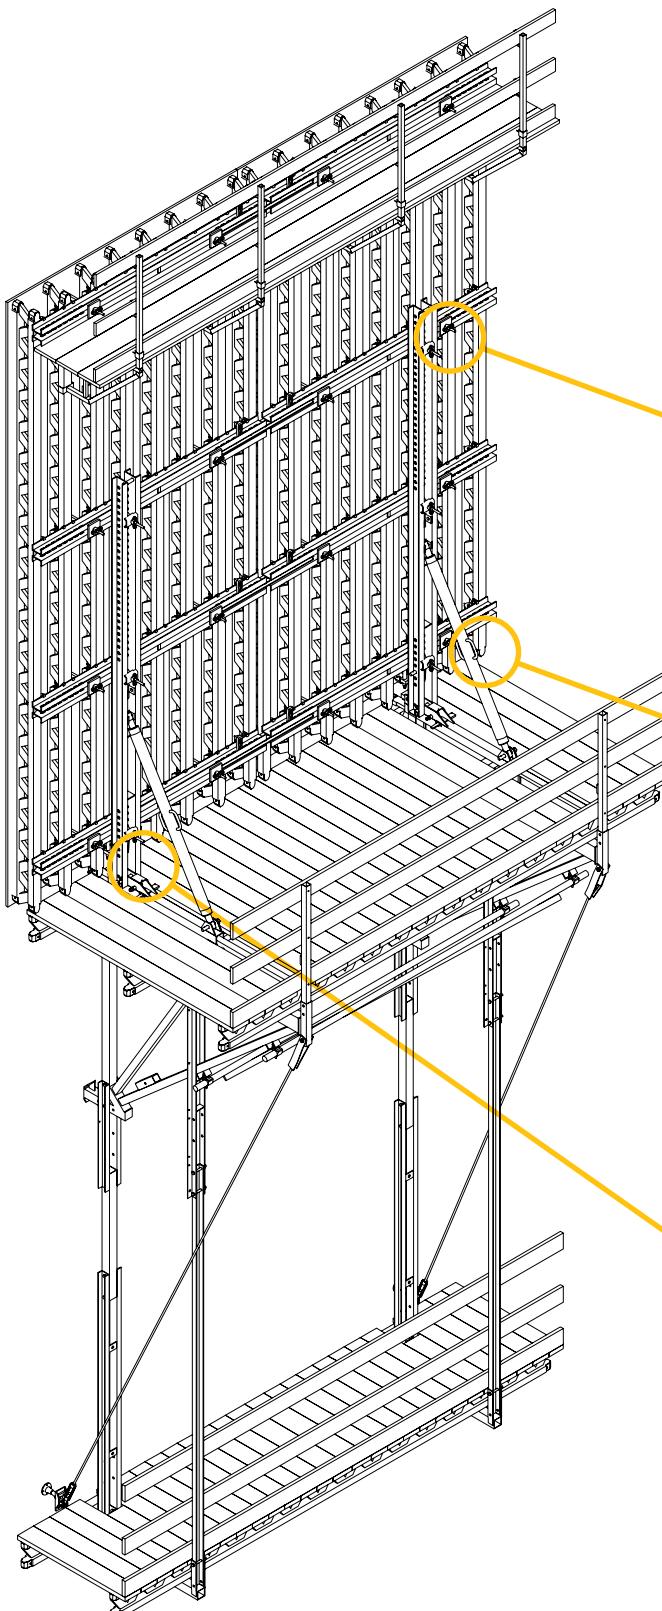

Construction-compliant load assumptions, simple formwork adjustment

Construction-compliant load assumptions

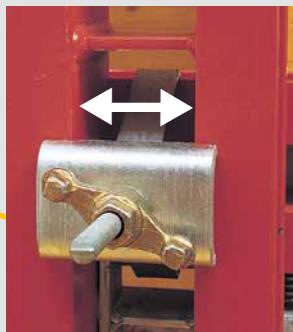

The high loading capacity of the CB climbing system allows wide spans resulting in large scaffold units with high load assumptions.

On the PERI CB 240, for example, reinforcing bars can therefore be stored when the formwork is retracted.

Simple adjustment of the formwork elements for neat and tidy concrete joints

Move element sideways
By releasing the Strongback Connector U 100-120.

Precise adjustment of the angle of inclination
With Adjustable Brace CB 164-224.

Element height adjustment
For VARIO GT 24.
With Height Adjusting Unit CB.

For MAXIMO and TRIO.
With Adapter TRIO-CB.

Climbing System CB

Wind loads, large VARIO standard elements

Wind loads

CB 240 and CB 160 design charts are available on request from PERI.

The PERI CB 240 provides wind safety at any position which means:

Locking the formwork on the carriage takes place quickly and securely by means of a wedge.

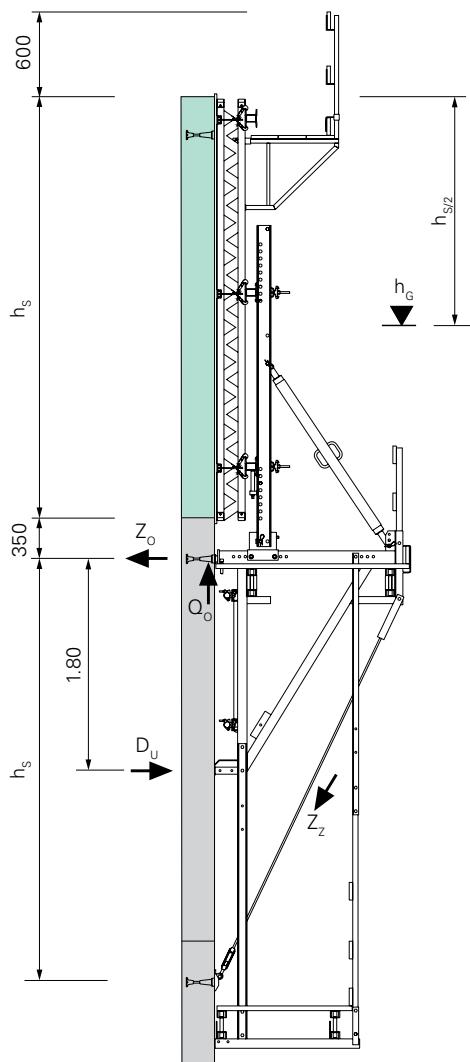

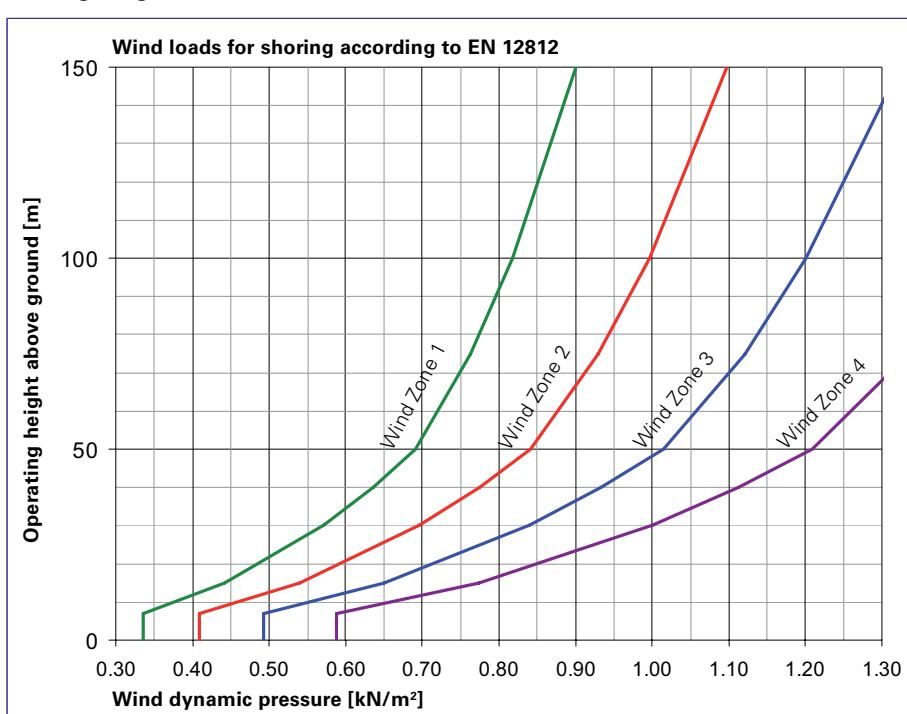

Complete safety against the wind immediately after mounting the tie rod.

CB 240 with VARIO GT 24 for construction of bridge piers.

Wind forces increase accordingly with the height. The DIN 1055, which forms the basis for the design, determines the wind loads according to wind zones, ground profiles and operating heights.

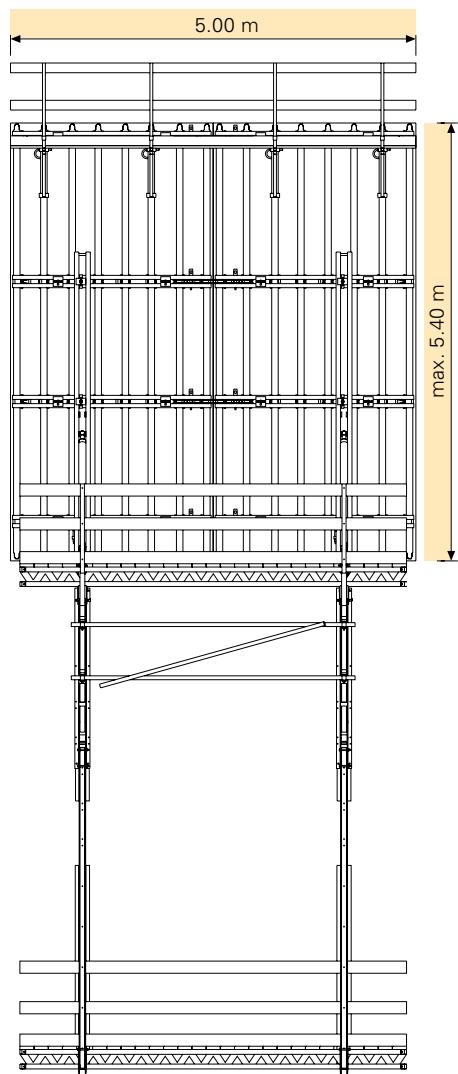

Wind dynamic pressure for transition zone inland and with load reduction factor* for period of application < 24 months.
* $K = 0,7$

Large VARIO standard elements

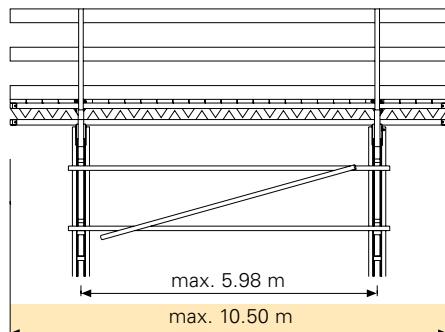

The strong CB 240 and CB 160 scaffold brackets allow the application of large VARIO standard elements.

5.40 m x 5.00 m = 27 m² formwork surface area is possible on only 2 scaffold brackets also with wind speeds of more than 120 km/h with standard arrangement of the brackets.

Extremely long platforms are also no problem with the CB 240 and CB 160.

Instead of timbers, GT 24 girders with high load capacity can be used as platform main beams. With a double GT 24 girder arrangement, platform lengths of up to maximum 10.50 m are possible.

CB 240 with finishing platform and VARIO GT 24 for construction of LNG gas tanks.

Climbing System CB

Even platform planking, Formwork Carriage CB 240

Even platform planking

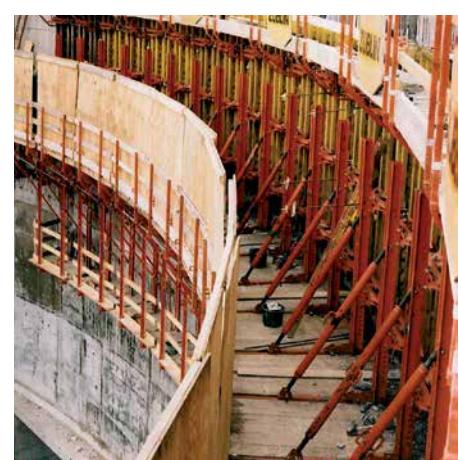

The 2.40 m wide planking has no tripping hazards and allows easy and safe movement on the working platform – in front of and behind the formwork.

With the PERI CB 240, the planking is positioned above the brackets. All possible tripping hazards are below the working platform.

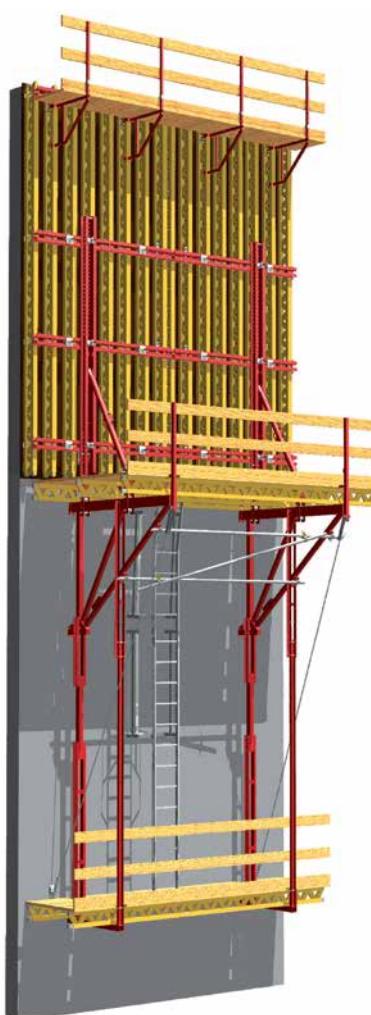

The working platform can be transported pre-assembled thus saving space and connected with the CB 240 brackets on the construction site.

Safe working conditions on the CB 240 in protection of the formwork element.

Closed platform decking for safe working.

Safe and secure movement on the CB 240 working platform.

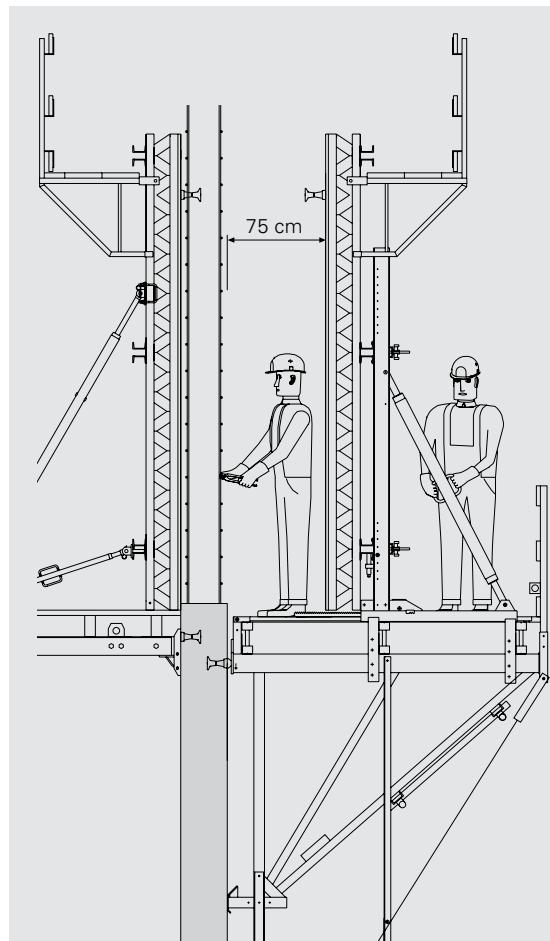

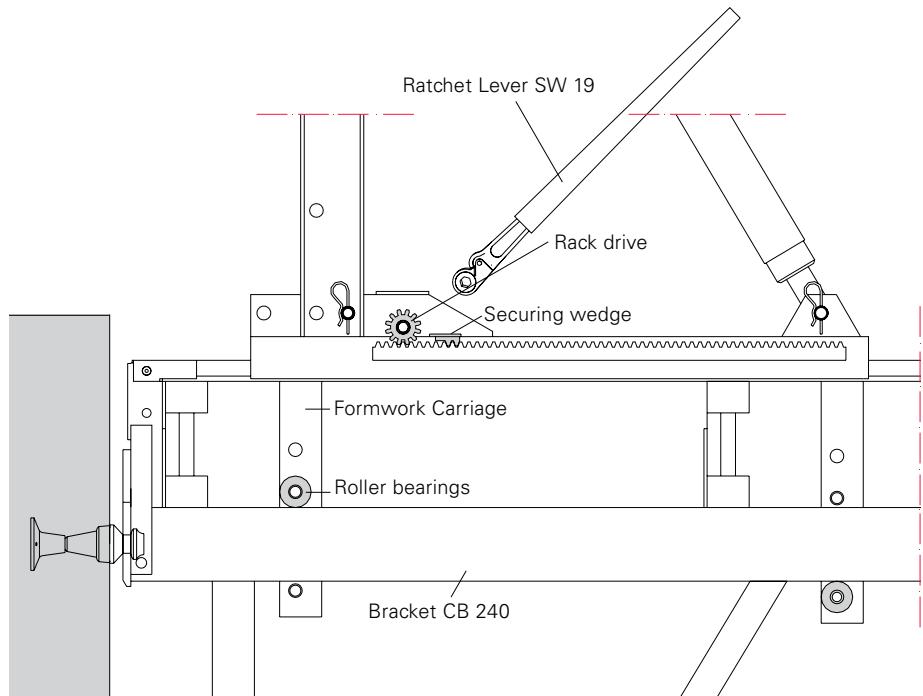

Carriage CB 240

With roller bearings for easy shutting and striking.

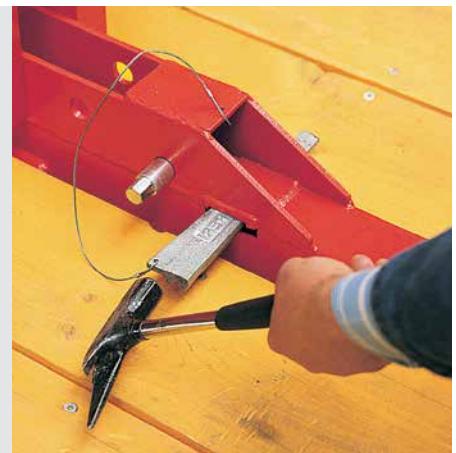

This means that large formwork elements can also be easily moved forwards and backwards.

75 cm working area when the formwork is retracted

This creates sufficient space for cleaning the formlining as well as installing the reinforcement.

With the captive wedge, the carriage can be fixed in any moving position.

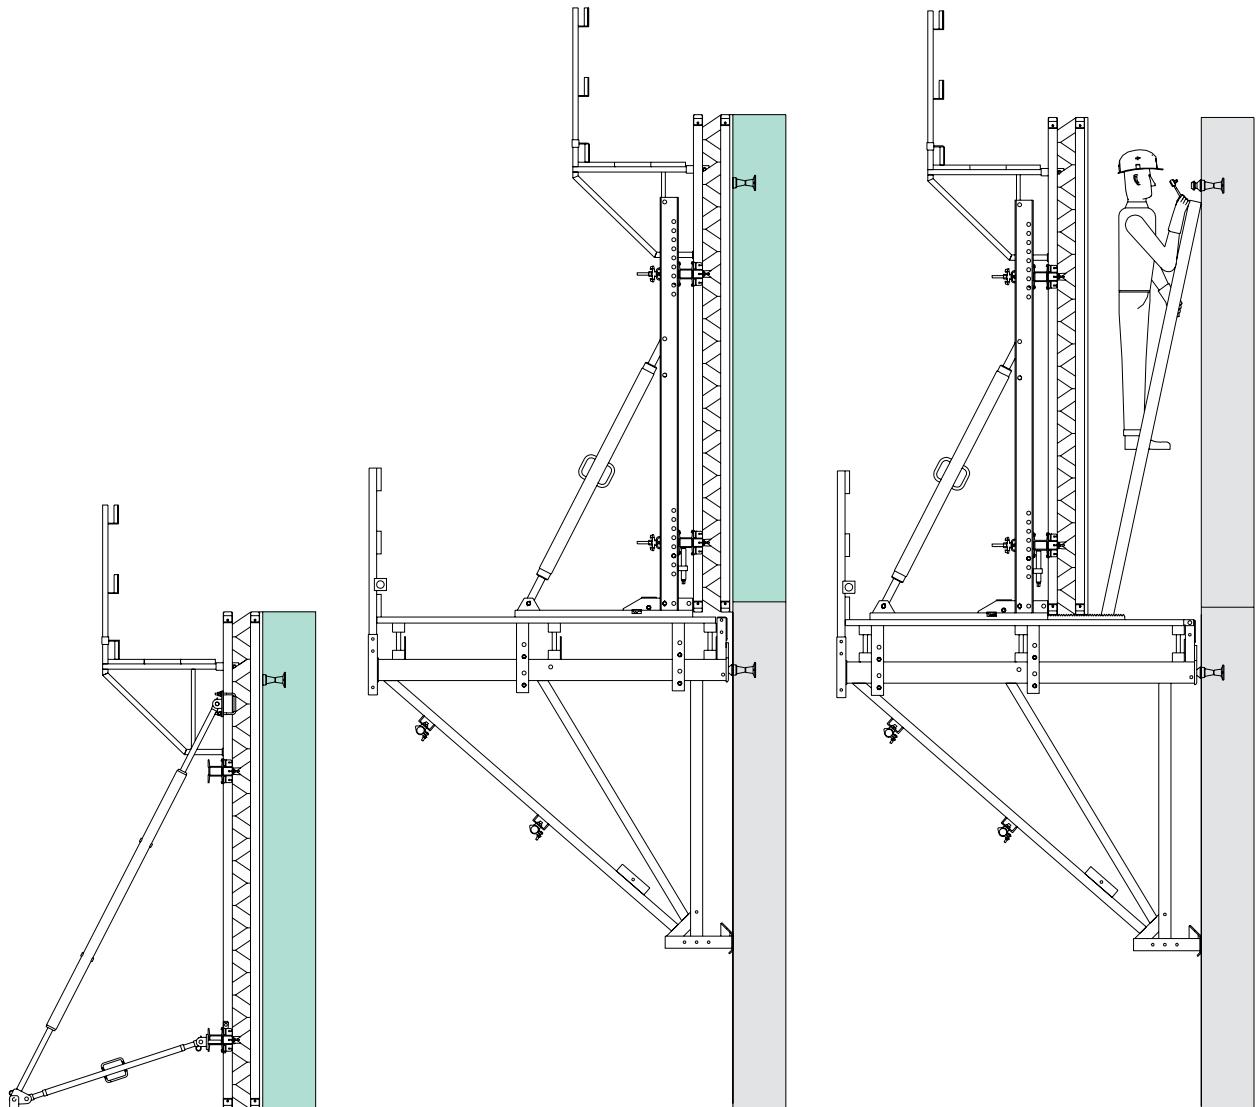

The Carriage CB 240 is moved using the Ratchet Lever SW 19, Item no. 027180.

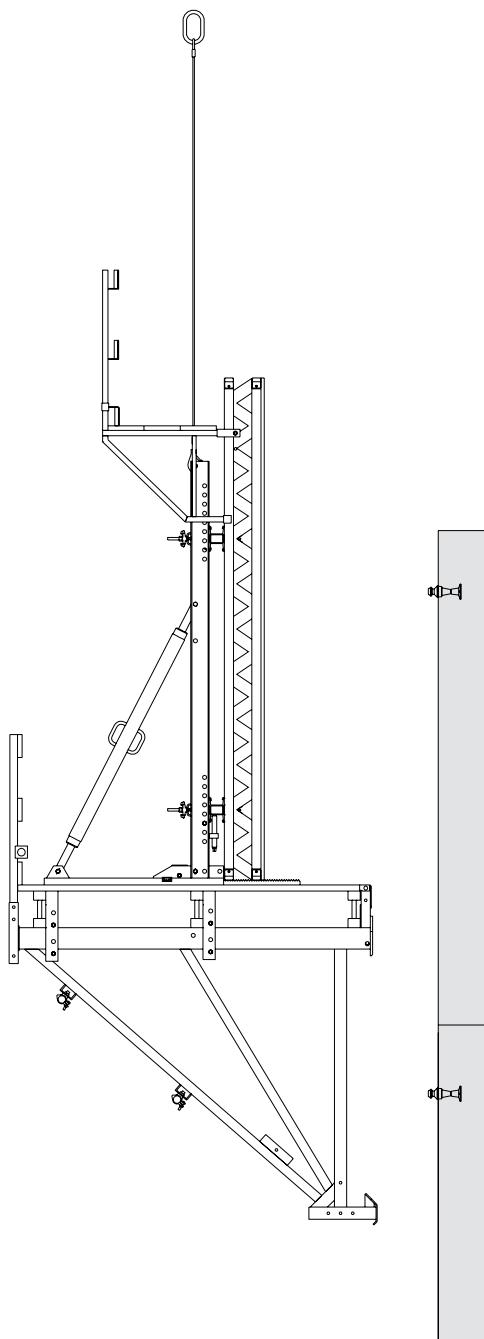

Climbing System CB

CB 240 climbing cycle sequence

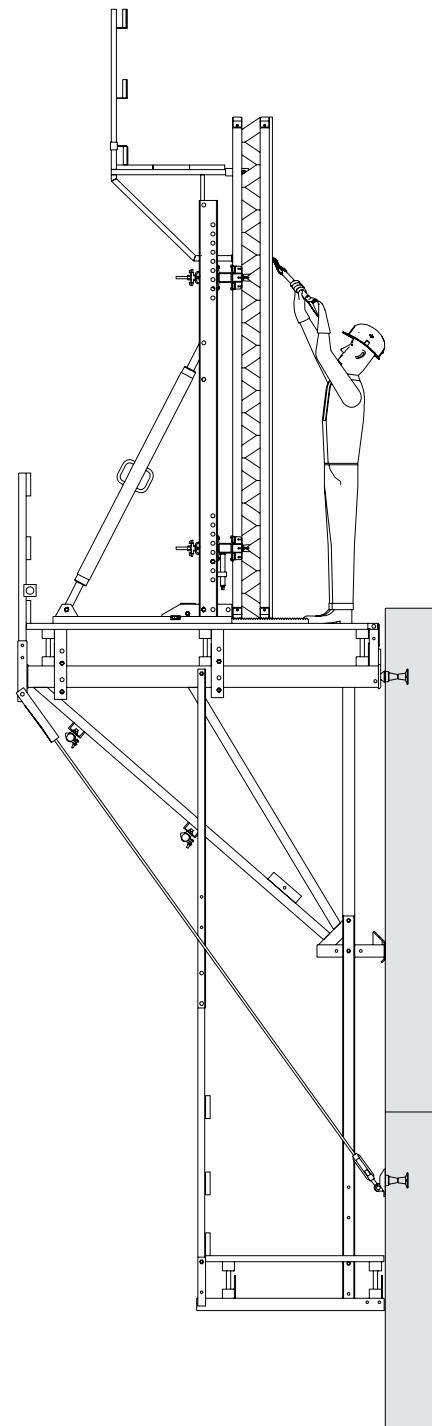

1. The first wall section is concreted. Install the leading anchor according to specifications.
2. After reaching the required concrete strength, mount the Scaffold Mounting Ring M24 and then attach the pre-assembled scaffold unit. Install the formwork and concrete the second section.
3. Retract the formwork and then mount the Scaffold Mounting Ring M24.

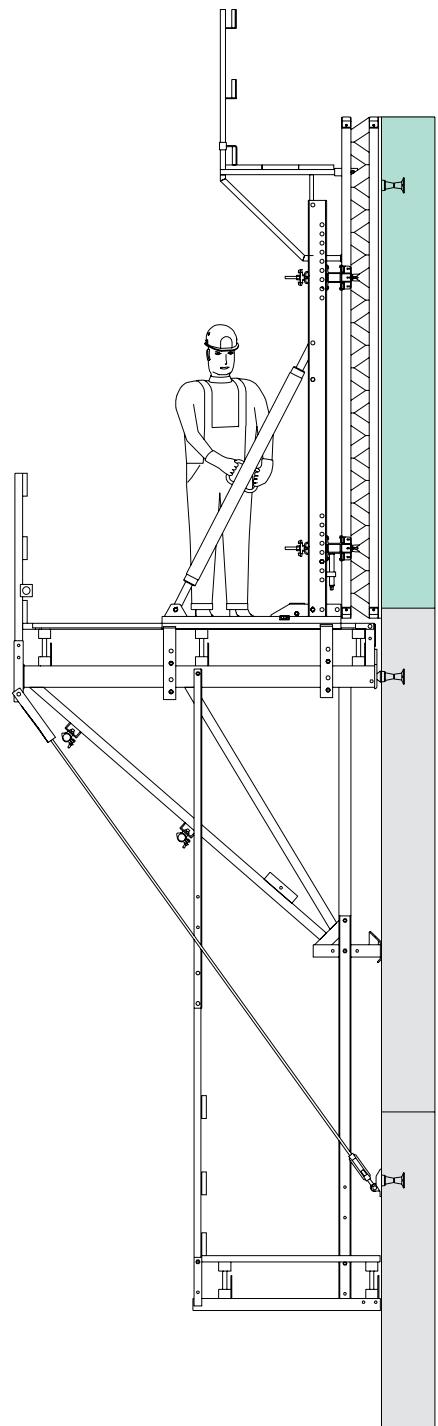

4. Lift the complete unit to the next section by means of the crane. If required, the finishing platform can be fitted.

5. Reinforcement work is now carried out and, if required, the formwork is placed at an angle.

6. Move the formwork forwards and concrete. At this point cycles continue as in Point 3.

Climbing System CB

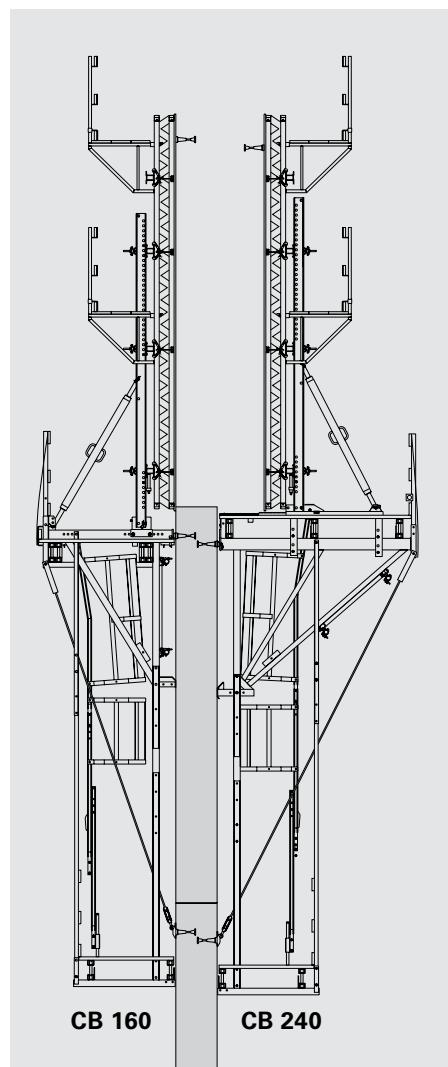

Application and moving procedure of CB 160

Application CB 160

The formwork is simply tilted backwards when striking. With a platform width of 1.60 m, a sufficient working area is available.

With the Adjusting Unit CB 160 the formwork is pushed tight to the previous concrete section.

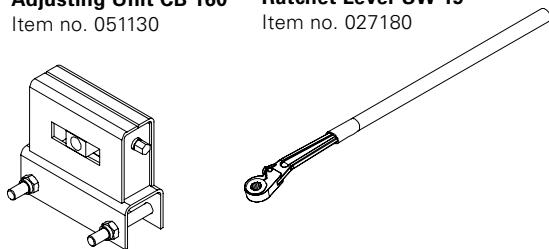

CB 160 combined with CB 240

Safe working conditions also on the CB 160 climbing system. An integrated ladder allows safe and secure access to the finishing platform.

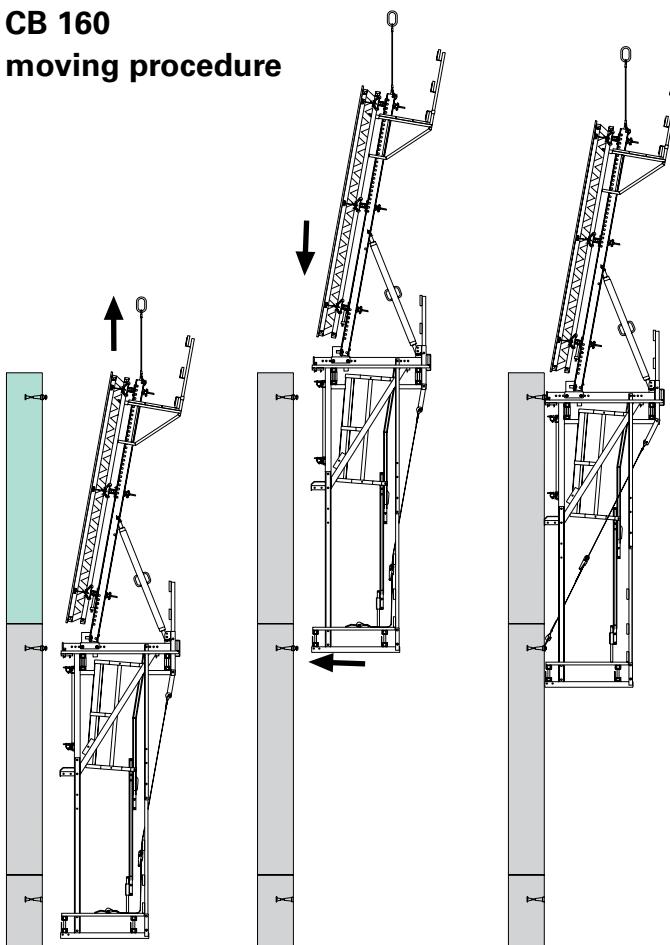

Adjusting Unit CB 160
Item no. 051130

Ratchet Lever SW 19
Item no. 027180

Combining CB 160 and CB 240 is the cost-effective solution for high walls.

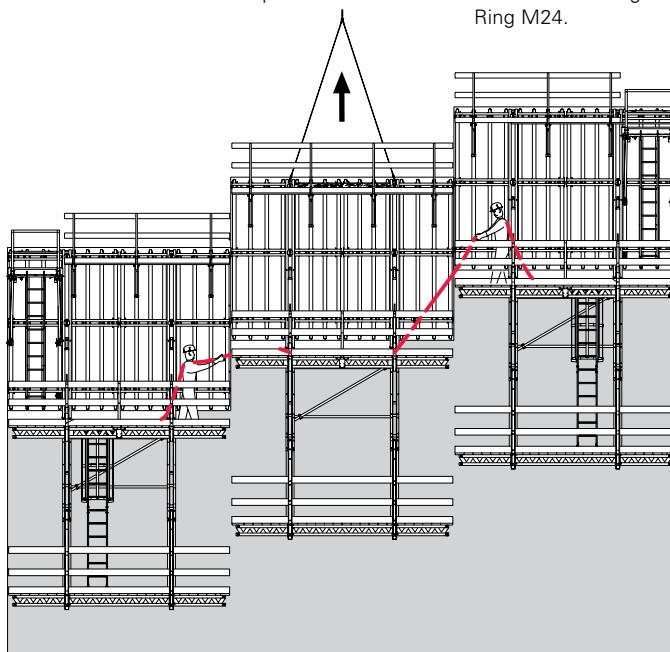

CB 160 moving procedure

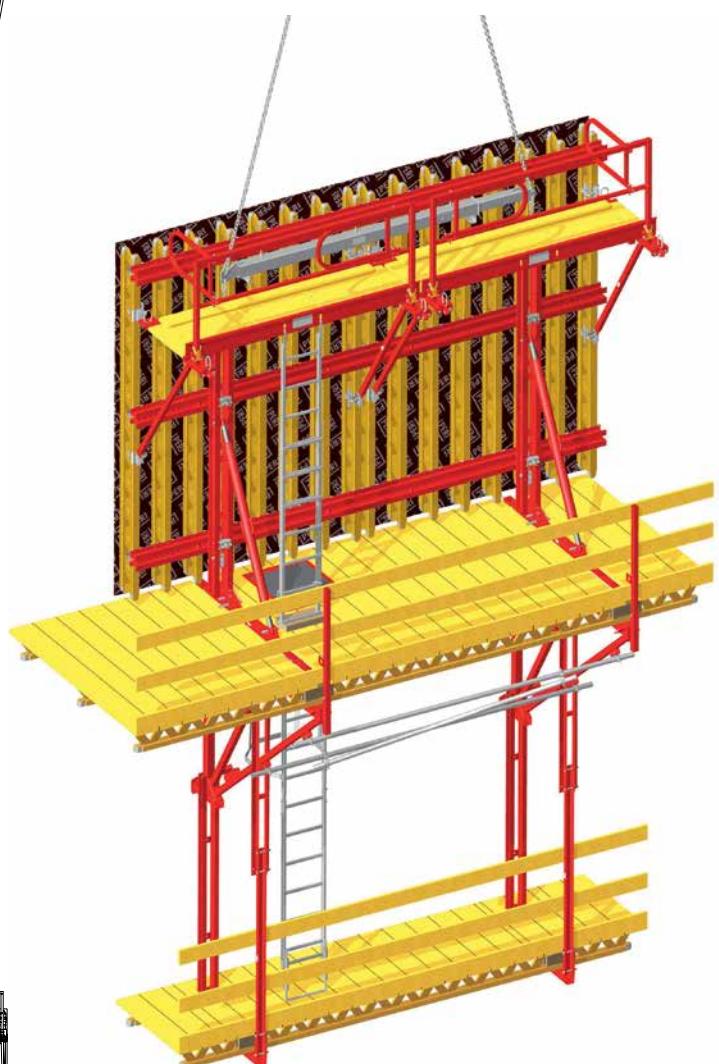

1. Lift the unit with the crane.

2. Lift and then place in position.

3. Attach unit on the Scaffold Mounting Ring M24.

Moving procedure with Climbing Traverse RCS

The PERI Climbing Traverse RCS 10 t, Item no. 112986, is used when moving larger or non-symmetrical units.

**Use a guide rope to ensure
that the moving procedure
is fully under control.**

Climbing System CB

Certified scaffold anchorage

With climbing systems, safety is significantly determined by the quality of the anchoring system used. Therefore, the PERI anchoring systems have been officially approved.

The PERI Climbing Anchor M24/DW 15 and M24/DW 20 are efficient in their use as well as guaranteeing safe handling.

PERI anchoring systems have been officially approved.

Version 1

Standard anchoring with variable anchoring depth.

With PERI Climbing Cone-2 M24/DW 15
Building Authority Approval No.
Z-21.6-1767.

Version 2

Anchoring for thin walls and limited anchor forces.

With PERI Screw-On Cone-2 M24/DW 20
Building Authority Approval No.
Z-21.6-1766.

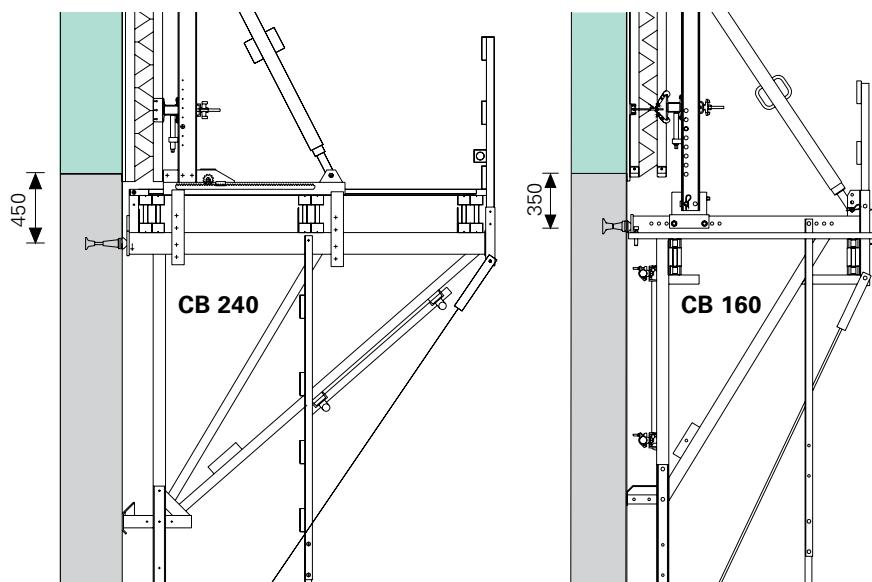

System	Reusable components			Lost components	
M24/ DW 15	 M24x120-10.9 Item no. 029560	 Scaffold Mounting Ring M24 Item no. 029470	 Climbing Cone-2 M24/DW 15 Item no. 031220	 Tie Rod DW 15 Item no. 030030	 Threaded Anchor Plate 15 Item no. 030840

Version 1, shown with CB 240

With PERI Climbing Cone-2 M24/DW 15 and Threaded Anchor Plate 15.

Version 2, shown with CB 160

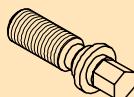

With PERI Screw-On Cone-2 M24/DW 20 and Threaded Anchor Plate 20.

Mounting of leading anchor Advancing Bolt M24

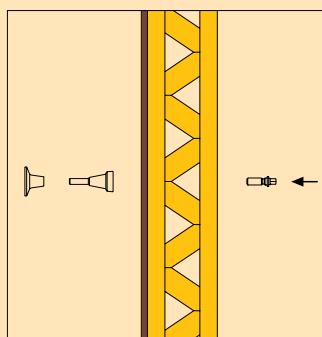

Plywood is drilled through.

E.g. with Wall Formwork VARIO GT 24.

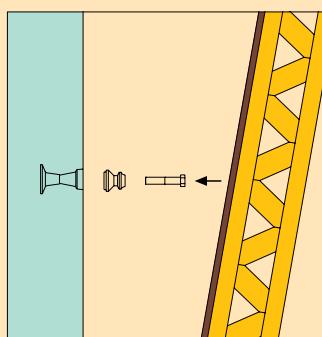

1. Leading anchor during striking

Position leading anchor drill through plywood Ø 25 mm. Screw climbing anchor and Advancing Bolt tightly together.

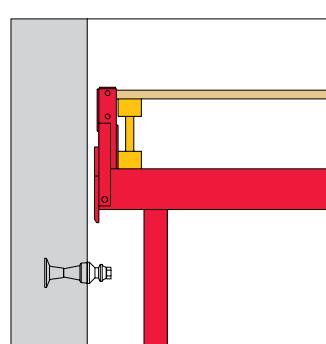

2. Attach scaffold suspension

Remove Advancing Bolt M24. Retract formwork. Attach Scaffold Mounting Ring M24 with Hex. Bolt M24 x 120.

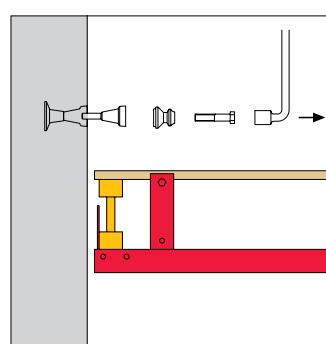

3. Mount scaffold brackets

Mount Scaffold Brackets CB 240 or CB 160 and immediately secure by means of safety pins.

4. Reusable anchor components

Screw out the Hex. Bolt M24 x 120 and cone from the finishing platform using the socket wrench SW 36.

Anchor Positioning M24

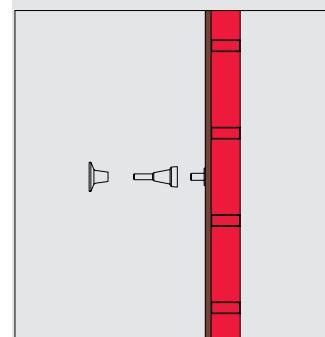

Plywood is not drilled through.

E.g. with panel formwork MAXIMO, TRIO.

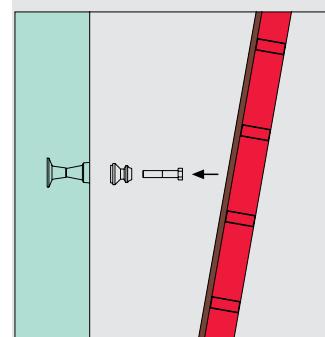

1. Leading anchor during striking

Position Anchor Positioning M24 and fix by nailing into the plywood. Turn Climbing Anchor on the Anchor positioning. Secure the Threaded Anchor Plate by means of tie wire to the reinforcement.

2. Attach scaffold suspension

Release the formwork from the concrete and retract (the nails are pulled through the plywood). Dismantle Anchor Positioning M24 using a pin wrench SW 14. Mount Scaffold Mounting Ring M24 using a Hex. Bolt M24 x 120.

5. Close anchor points

The remaining anchor hole is closed by means of the Concrete Cone KK. This results in an optically-pleasing concrete surface.

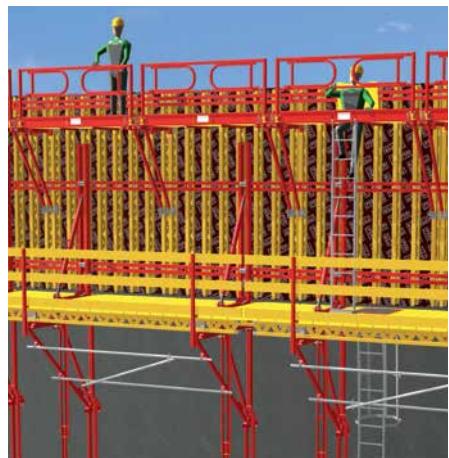

Climbing System CB

High level of working safety with system components

The system components for the CB 240 and CB 160 climbing systems provide a very high degree of safety.

Integrated ladders with hinged hatches and ladder cages ensure safe access to the finishing and concreting platforms. Handrail post for fixing the end and side handrails.

Using VARIO platforms, the CB 240 climbing system ensures safe access to the concreting level.

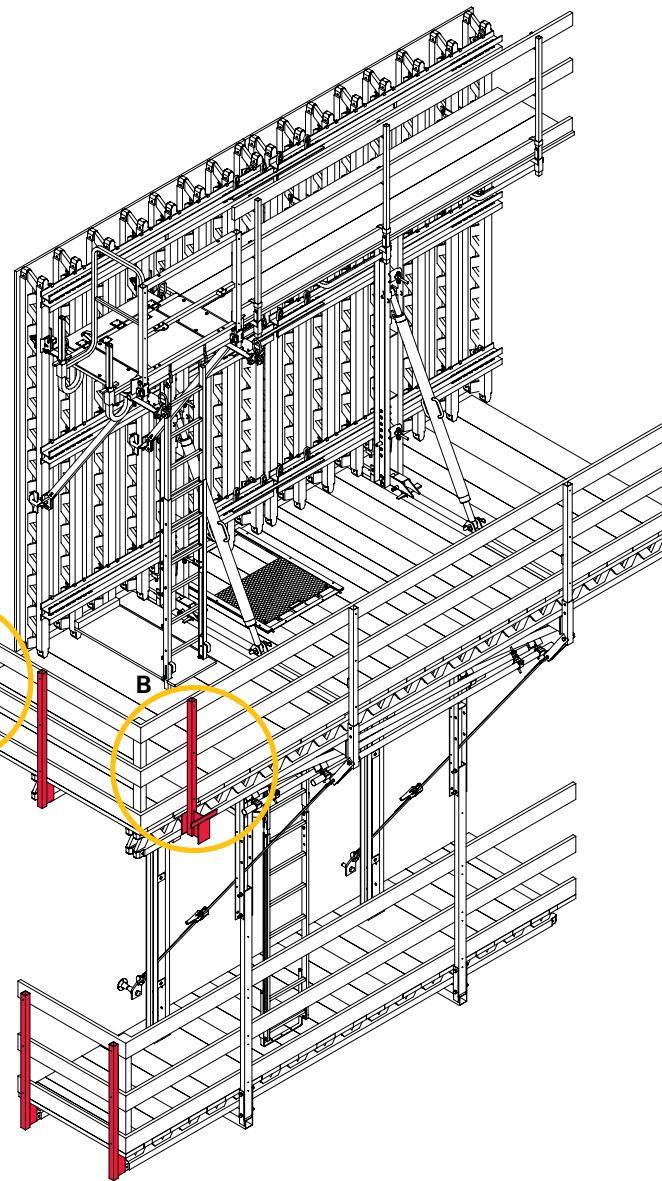

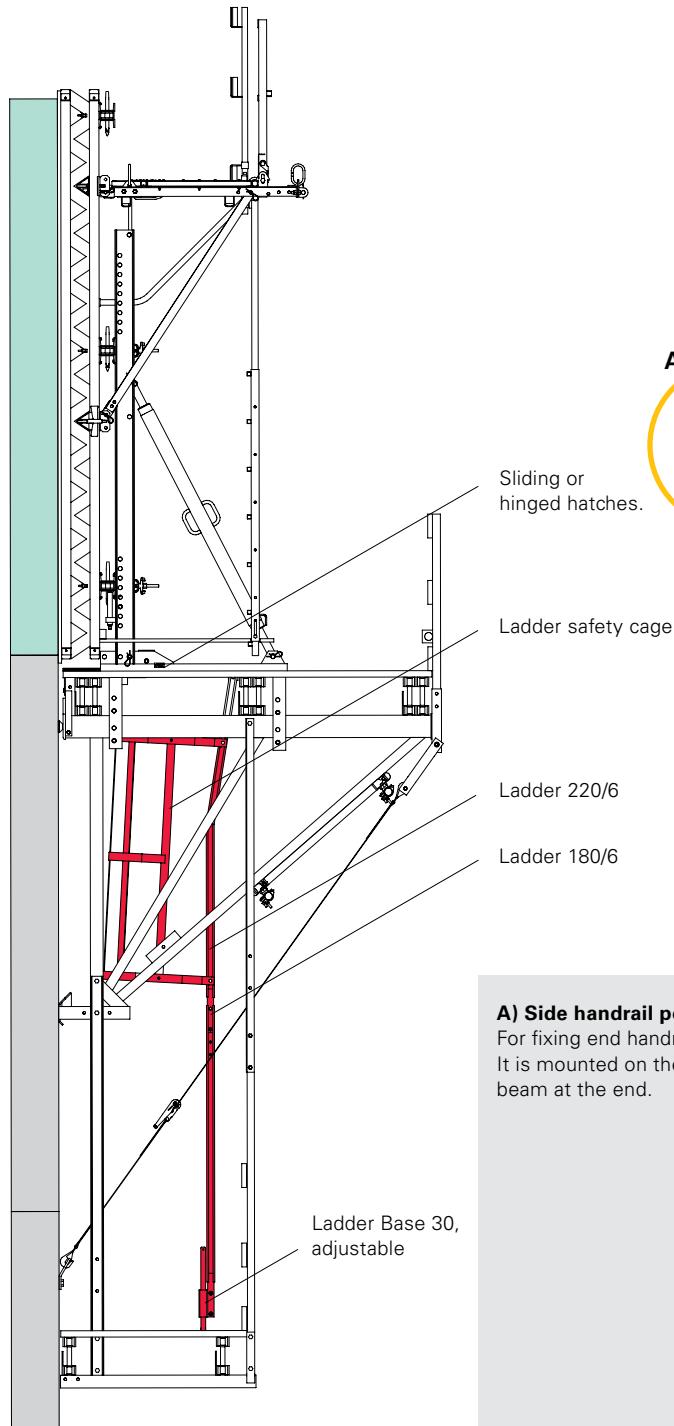

Easy access to the finishing platform with the PERI ladder.

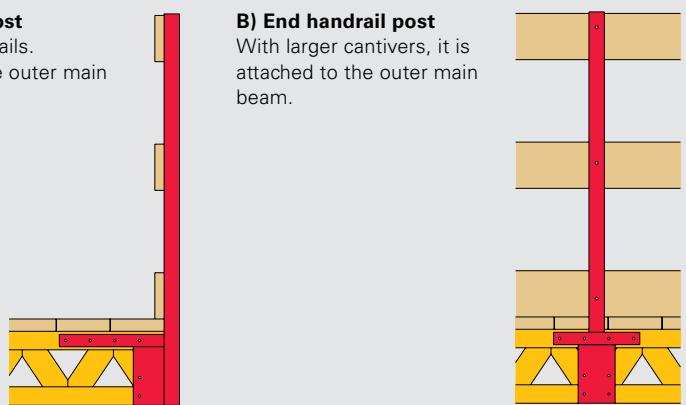

Accessing the two finishing platforms is carried out with CB 240 and CB 160 system components.

Access Ladder

Safe and secure access to the CB 240 and CB 160 finishing platform at all heights.

**A) Side handrail post**

For fixing end handrails.
It is mounted on the outer main beam at the end.

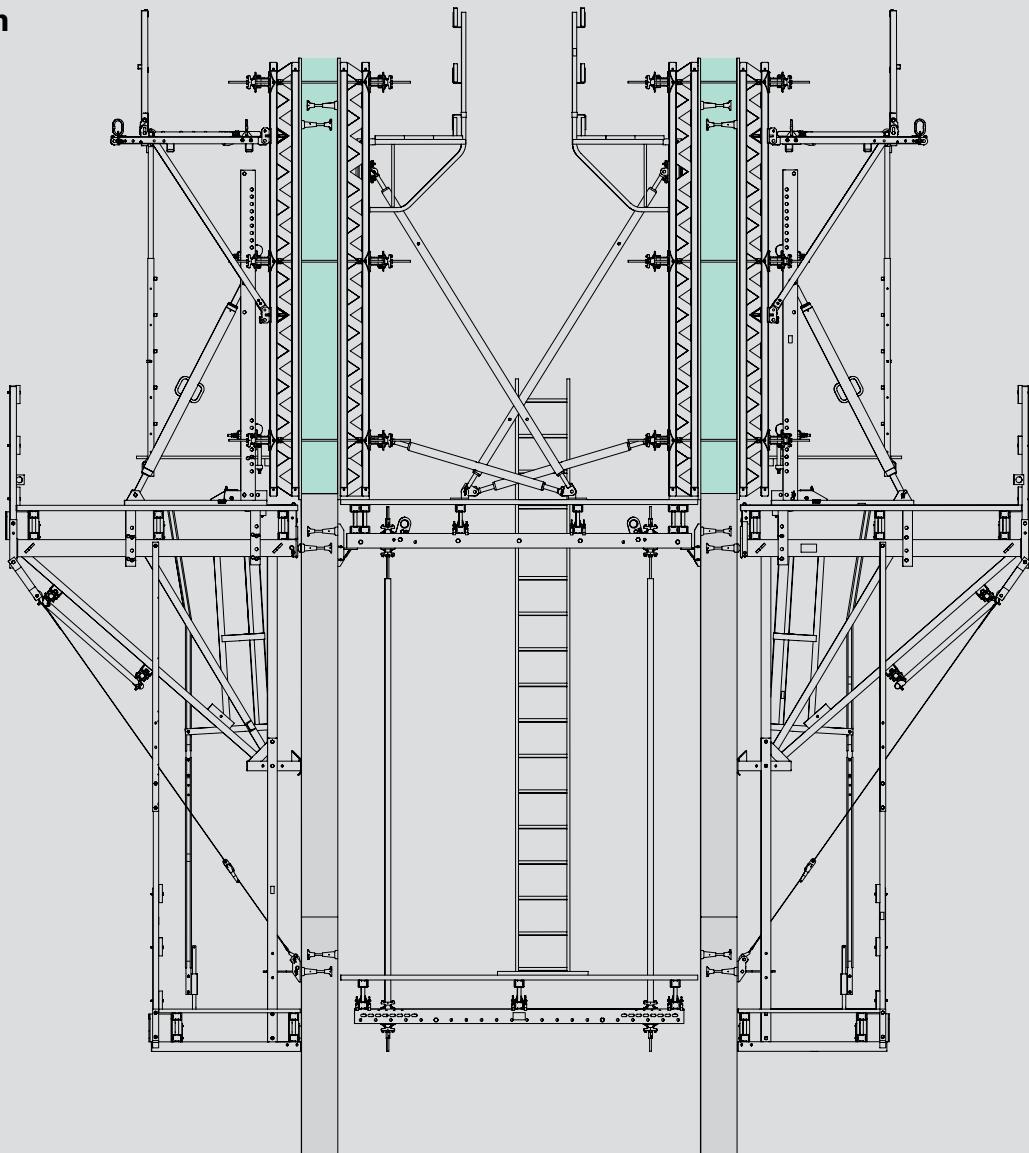

**B) End handrail post**

With larger cantilevers, it is attached to the outer main beam.

BR shaft platforms

Safe support for inside shaft formwork

Application

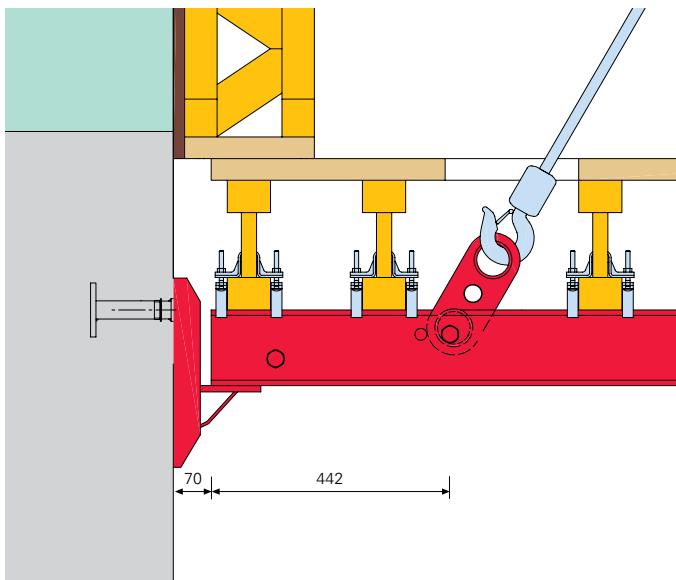

The BR shaft platform serves as support for inside shaft formwork panels. It consists of Platform Beams BR exactly tailored to the size of the particular shaft. The planking is supported by Girders GT 24 or timbers attached by hook straps to the Platform Beam.

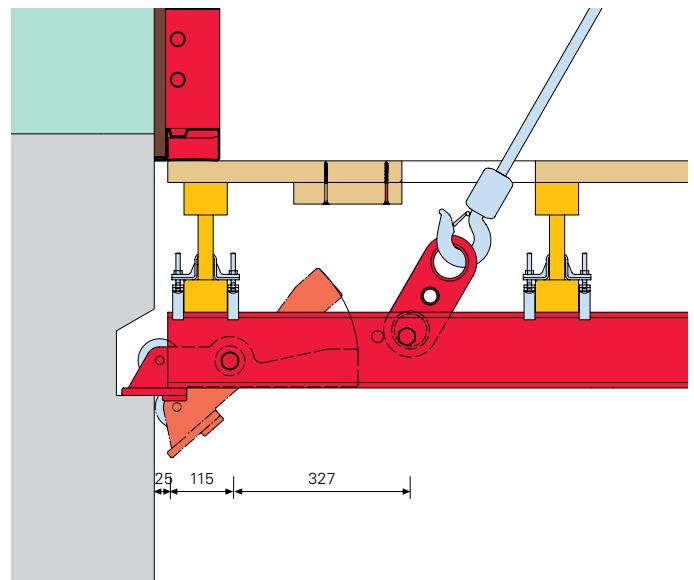

The support of the shaft platform is provided by Folding Brackets 25 bolted to embed climbing anchors e.g. Anchor Sleeve M24. Alternatively Gravity Pivot Plates are attached to the Platform Beam, engaging into reusable cast-in Bearing Boxes BR.

Support on Folding Bracket 25

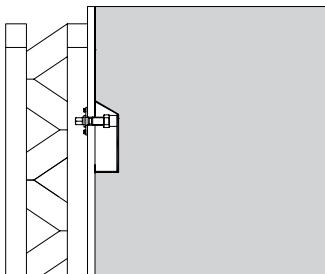

Perm. load-bearing capacity 25 kN

**Support on gravity pivot plate**

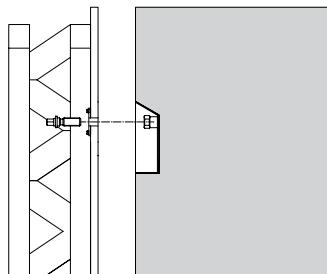

Perm. load-bearing capacity max. 38 kN

**Assembly sequence****Platform Beam BR with gravity pivot plate**

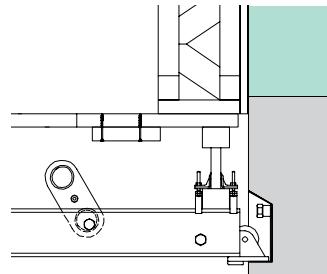

1. Bearing Box BR installed

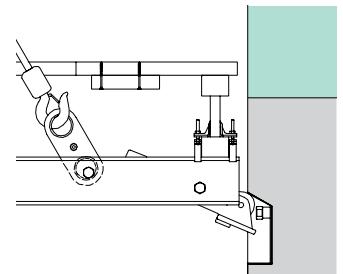

2. Struck

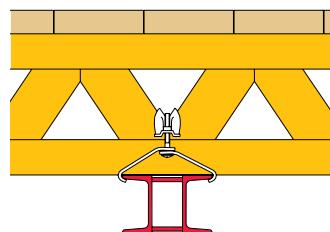

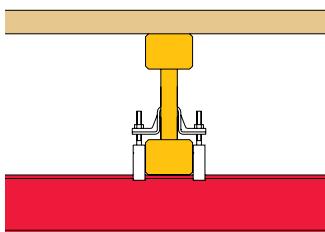

3. Platform supported

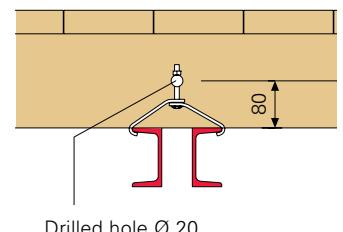

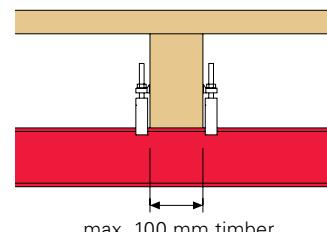

4. Platform lifted

**Installation of platform decking**

1. With Girder GT 24

2. With square-shaped timber

**Hook Strap HB 24-100/120**

for Profile U 100 / U 120

Hook Strap HB 24-140/160

for Profile U 140 / U 160
